Clark Synthesis Launches New Website

FOR IMMEDIATE RELEASE (February 7, 2012, DENVER, CO) Clark Synthesis, Inc., the worldwide leader in high fidelity sound tactile technology, announced the debut of its new website just prior to the official launch date of its new Aguaceiro™ MultiClimate Airspeaker.

“Our new website is designed to be exceptionally functional and features our new blog,” said Bill Phillips, President of Clark Synthesis. “As we rebrand company products and strengthen our online presence, naturally an updated website is a key part of this process. Our distributors can obtain product information and images at any time on our website, and of course, information can be easily found on our new Aguaceiro™ outdoor speaker in our expanded Aquasonic™ product line. ”

Clark Synthesis is officially launching its new Aguaceiro™ MultiClimate Airspeaker on March 1st. This highly anticipated outdoor speaker is more than water resistant—it’s weatherproof in any environment. It can perform as well out of the box as it can when it is dug out from four feet of snow, has crusted saltwater seaspray rinsed off it, or it is baked in 110 degree desert temperatures. “The outdoor living market is ripe for a product like this,” said Bill Phillips, “Why would anyone buy an outdoor speaker they’ll have to replace in a few years when they can buy the Aguaceiro™?”

Since its inception in 1994, Clark Synthesis is recognized worldwide as the leader in exceptional audio technology. With two distinct product lines, Clark Synthesis serves a wide spectrum of markets internationally. The Aquasonic™ product line features the world’s only full-frequency, full-fidelity underwater loudspeaker, along with other specialized transducers used in spas, outdoor living and marine applications. The Full Contact Audio™ product line features indoor transducers used in home theaters, gaming, ProSound and military applications. With flexible product lines, a strong industry reputation, and a commitment to excellent customer service, Clark Synthesis products redefine the world of audio.
