

Diluvio™ Underwater Loudspeakers Used in Mermaid Show at Denver Aquarium

FOR IMMEDIATE RELEASE – Denver, CO – (6/5/12) – Clark Synthesis, Inc., the worldwide leader in total immersion sound technology, announces the use of the Diluvio™ Underwater Loudspeakers in the Denver Aquarium Mystic Mermaid show. Bill Phillips, President of Clark Synthesis, replies:

“We are so excited that our speakers are being used in such a unique and creative way. The aquarium is one of Denver’s finest attractions and we are honored to have our speakers used there. Thanks to the Denver Aquarium for putting them to a fun and interesting use.”

The Denver Aquarium is using Clark Synthesis underwater speakers in their Mystic Mermaid show – part of the Under the Sea Exhibit, which simulates the habitat of a coral reef. The Mystic Mermaid show features live mermaids swimming underwater and demonstrating environmental concern and care of the planet’s oceans. The underwater speakers are being used to give directions to the mermaids and cue their movements.

Since its inception in 1994, Clark Synthesis is recognized worldwide as the leader in exceptional audio technology. Clark Synthesis serves a wide spectrum of markets internationally. The Aquasonic® product line features the world’s only full-frequency, full-fidelity underwater loudspeaker, along with other specialized transducers used in spas, outdoor living and marine applications. The Full Contact Audio® indoor transducers are used in home theaters, gaming, ProSound and military applications. With a flexible product line, a strong industry reputation, and a commitment to excellent customer service, Clark Synthesis products redefine the world of audio.
