

TA0.1 AMPLIFIER W/ REMOTE

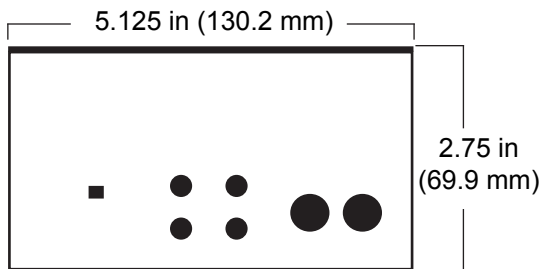

Designed to pair seamlessly with Clark Synthesis transducers, the Clark Synthesis TA0.1 amplifier is an excellent choice for your audio needs. With its compact size and wired remote control (approximately 4 ft.), the TA0.1 can be custom-installed directly in many home theater chair applications, as well as gaming chairs.

The TA0.1 delivers flexibility with professional and consumer level inputs, 2-channel powered loop-through, 5-way binding posts, and fully automatic AC power selection. The TA0.1 can be used at full-frequency or as a low-frequency amplifier with variable crossover. The unit is designed to work with any transducer in the Full Contact Audio[®] product line.

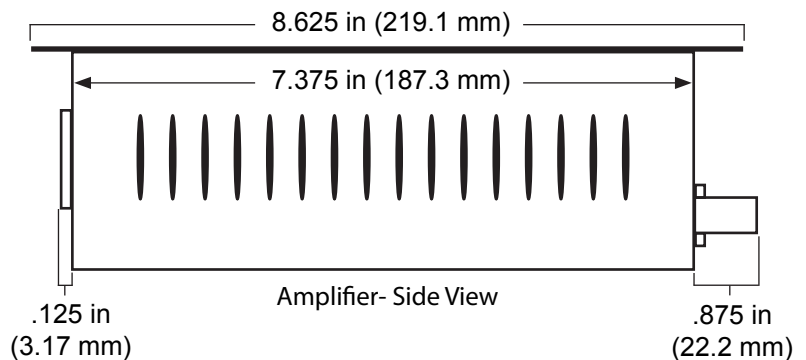

Clark Synthesis Professional Transducers were originally developed for military simulation devices to transfer explosions, gunshots, and other sounds into a tactile experience that can be felt as well as heard. What is now our Full Contact Audio[®] product line was enthusiastically received by the home theater industry and video gaming community.

Wired Remote Control Interface
5 in W (127 mm) x 2.125 in H (54 mm) x 2 in D (50 mm)
